        EXPERIMENT
       Title
          SUB ARRAY WITH MAX SUM
 Description
            You are given a list of integers, and your task is to find the subarray with the maximum sum. Write a function or method to solve
 AS SORTIST
            this problem efficiently and return the maximum sum.
            Input:
            n: the no of elements in the array
            nums (List of integers): A list of integers (1 <= len(nums) <= 10^5)
            Sample input:
            8
            -1 2 3 10 -4 7 2 -5
                                                                                                                                , ch089 38
            Sample output:
            20
     308
            Explanation:
            The max subarry sum is 20. The subarray is [2,3,10,-4,7,2]
